

EX. NO. 09 - PROCESS EXPLORER PROCESS ANALYSIS

Experiment Name	Use Process Explorer to Identify Suspicious Processes
Aim	To use Microsoft Sysinternals Process Explorer to examine running Windows processes and identify potentially suspicious processes by checking process details, executable path, digital signature, registered services, CPU usage, and memory usage.
Tool Used	Windows 10/11; Microsoft Sysinternals Process Explorer

OBJECTIVE

- Examine running Windows processes using Process Explorer.
- Check process details, executable path, digital signature, registered services, CPU usage, and memory usage.
- Analyze the selected process and identify whether obvious suspicious indicators are present.

PROCEDURE

Step 1: Launch Process Explorer

Microsoft Sysinternals Process Explorer was downloaded and extracted. The procexp64.exe application was opened to display the processes currently running on the Windows system.

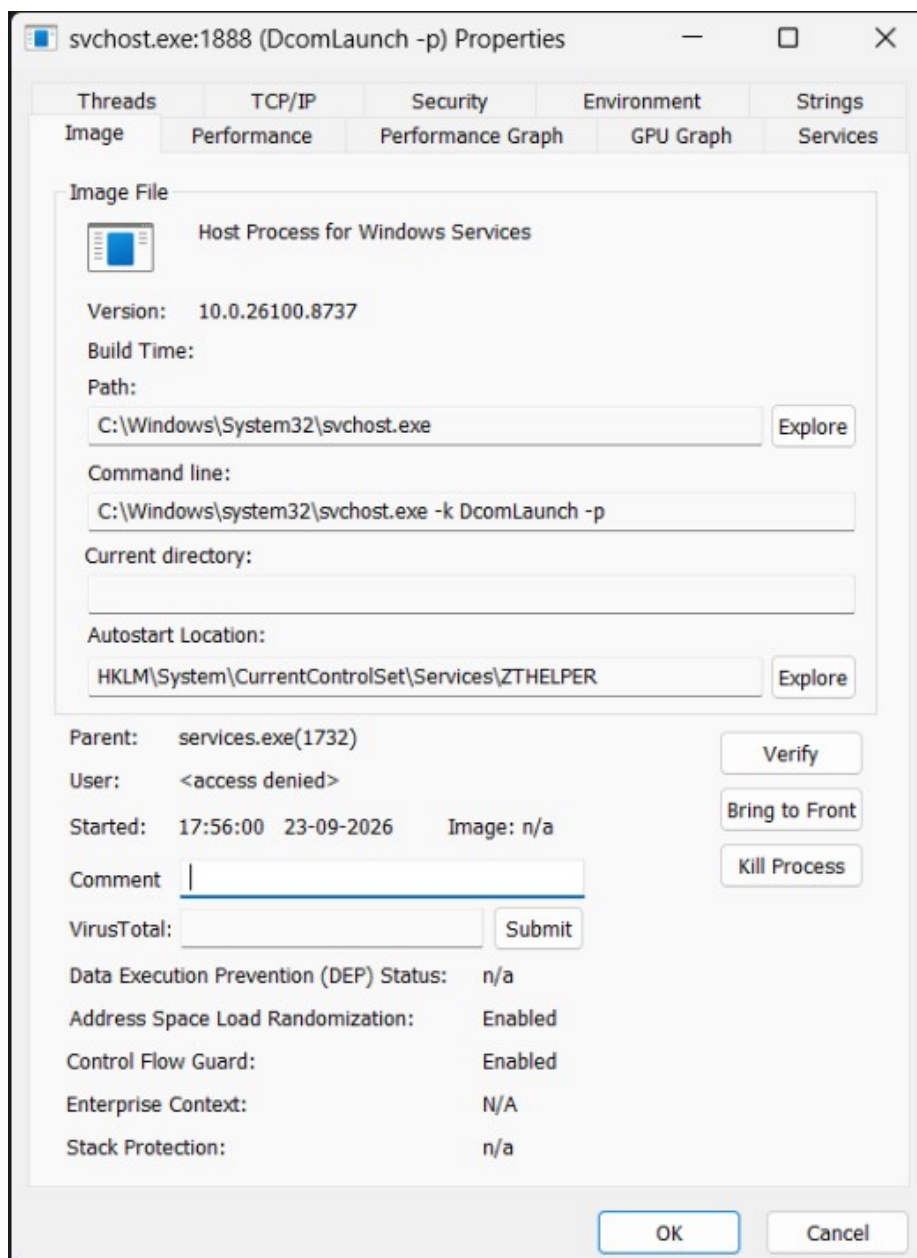

Process	CPU	Private Bytes	Working Set	PID	Description	Company Name
Registry		7,684 K	53,796 K	272		
System Idle Process	93.47	60 K	8 K	0		
System	0.09	52 K	4,436 K	4		
Interrupts	0.19	0 K	0 K	n/a	Hardware Interrupts and DPCs	
smss.exe		1,164 K	1,532 K	1072		
Memory Compression	< 0.01	1,864 K	6,15,760 K	3732		
csrss.exe		7,804 K	1428			
wininit.exe		1,576 K	9,492 K	1520		
services.exe	< 0.01	7,380 K	20,056 K	1732		
svchost.exe		13,020 K	41,464 K	1888	Host Process for Windows S...	Microsoft Corporation
RtkAudUService64.exe		22,756 K	18,980 K	6988		
WmiPrvSE.exe		3,768 K	12,904 K	7444		
SearchHost.exe		74,620 K	1,28,216 K	11344		Microsoft Corporation
msedgewebview2.exe	0.09	44,604 K	1,15,192 K	3240	Microsoft Edge WebView2	Microsoft Corporation

CPU Usage: 6.53% Commit Charge: 58.26% Processes: 247 Physical Usage: 53.68%

Screenshot 1 - Process Explorer main window

Step 2: View Running Processes

The main Process Explorer window displayed active processes in a hierarchical process tree. The available information included Process Name, CPU Usage, Private Bytes, Working Set, Process ID (PID), Description, and Company Name.

Screenshot 2 - Process properties

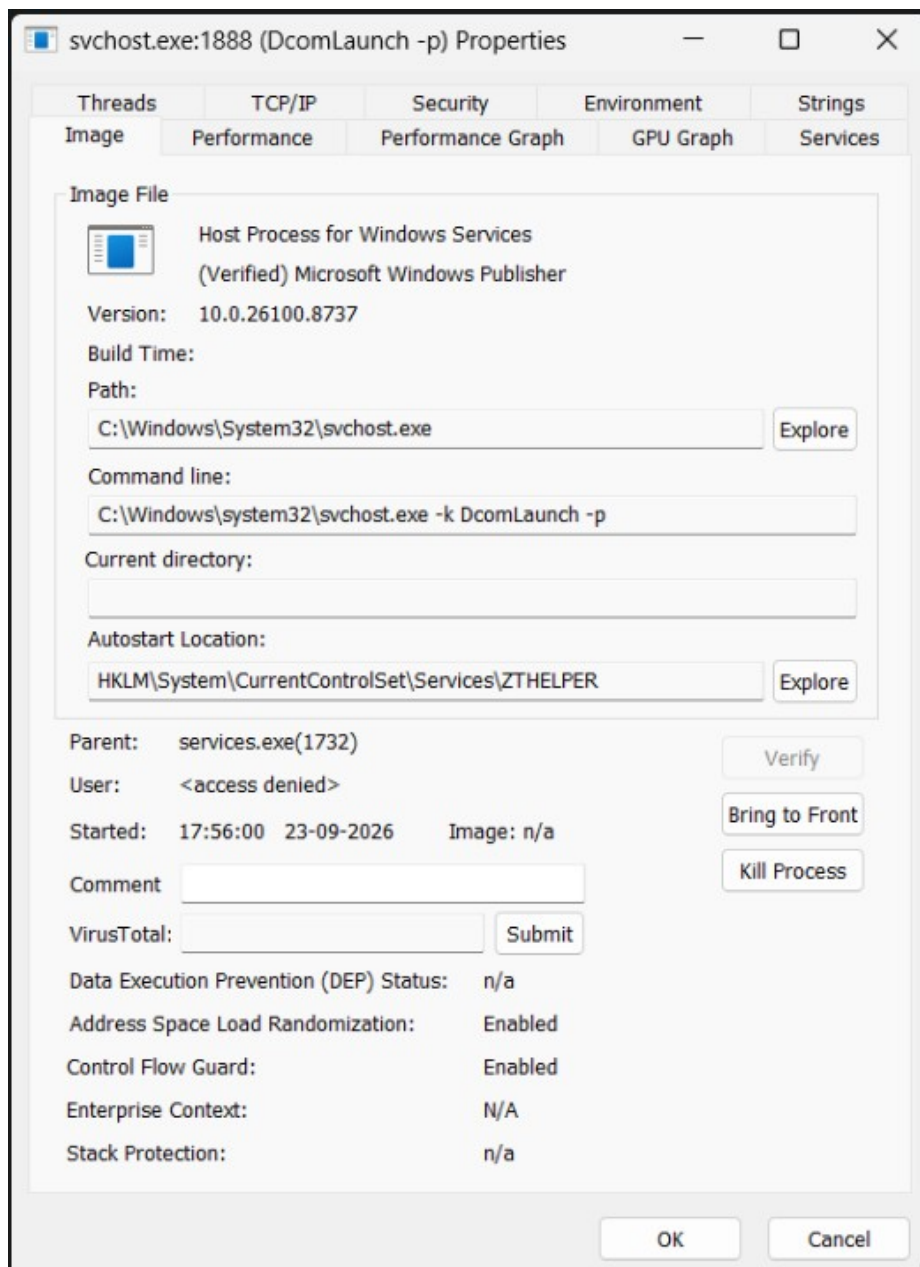

Step 3: Select a Process

The svchost.exe process with PID 1888 was selected for detailed examination. The process was displayed under the parent process services.exe.

Step 4: Check Process Properties

The Properties window of svchost.exe was opened to examine its process information.

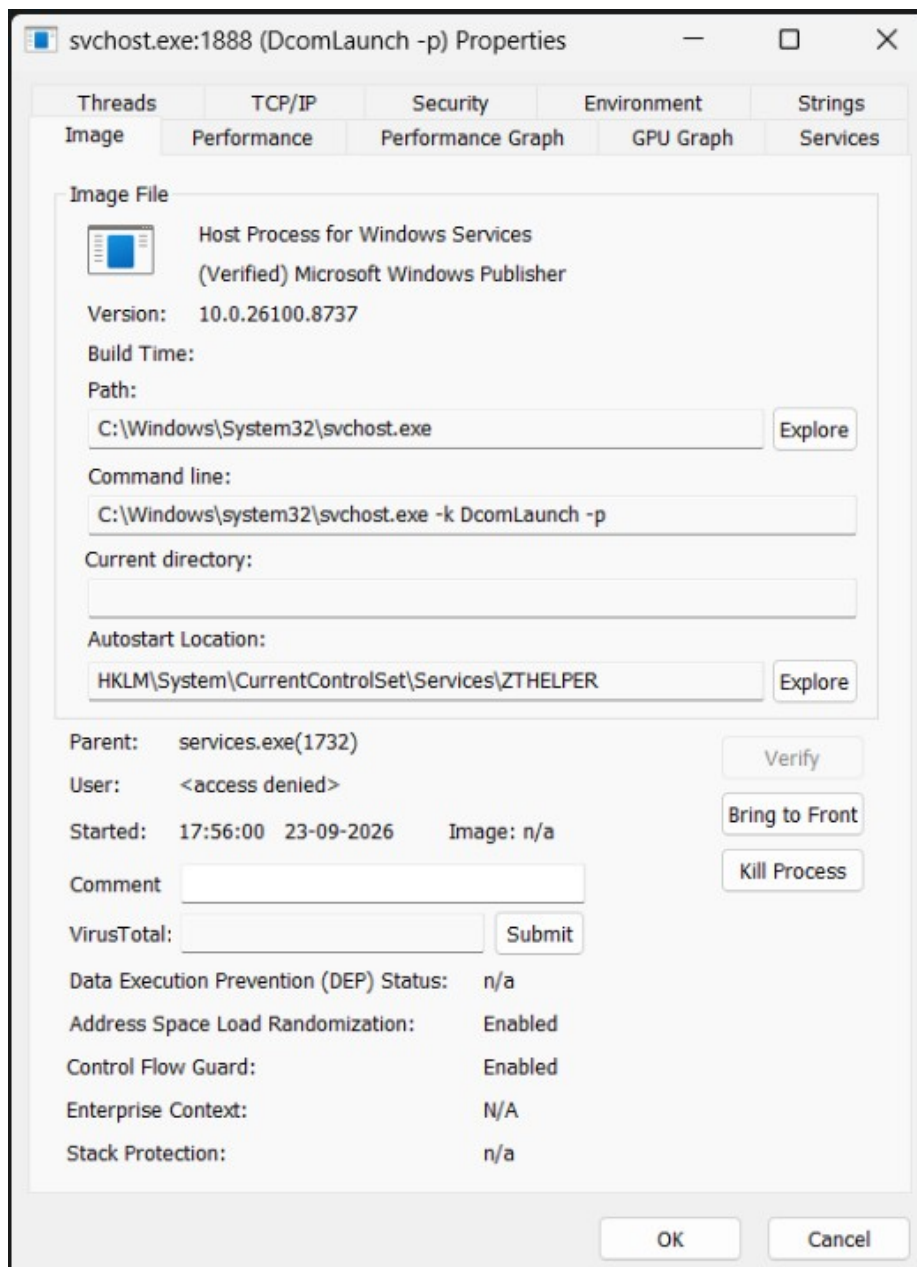

Process	svchost.exe
PID	1888
Description	Host Process for Windows Services
Version	10.0.26100.8737
Path	C:\Windows\System32\svchost.exe
Parent	services.exe (1732)
Command Line	C:\Windows\system32\svchost.exe -k DcomLaunch -p

Screenshot 3 - svchost.exe process properties

Step 5: Verify Digital Signature

The digital signature of the selected process was checked using the Verify option in the Properties window. The result displayed “(Verified) Microsoft Windows Publisher”, indicating that the executable was verified as being published by Microsoft Windows.

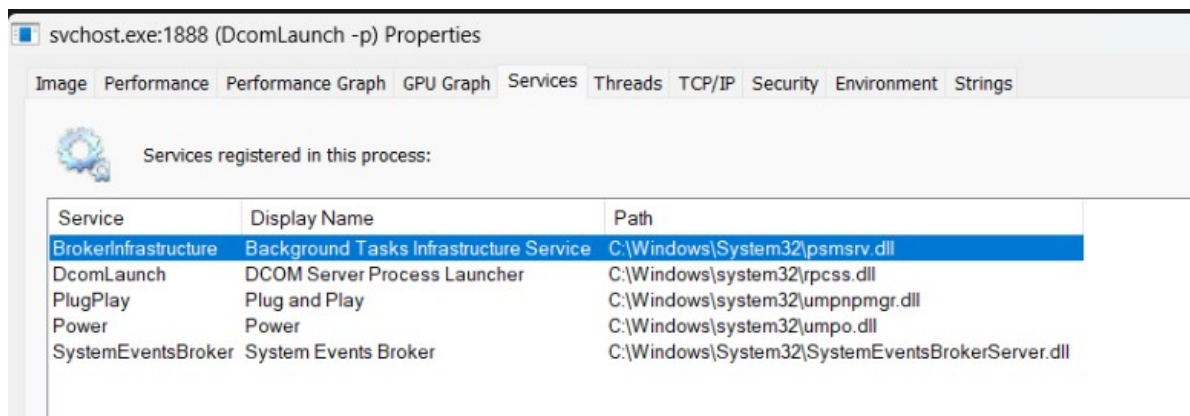

Screenshot 4 - Verified Microsoft Windows Publisher signature

Step 6: Check Registered Services

The Services tab was opened to examine the services associated with the selected svchost.exe process.

Service	Display Name
BrokerInfrastructure	Background Tasks Infrastructure Service
DcomLaunch	DCOM Server Process Launcher
PlugPlay	Plug and Play
Power	Power
SystemEventsBroker	System Events Broker

The associated service paths were located under the Windows System32 directory.

Screenshot 5 - Registered services

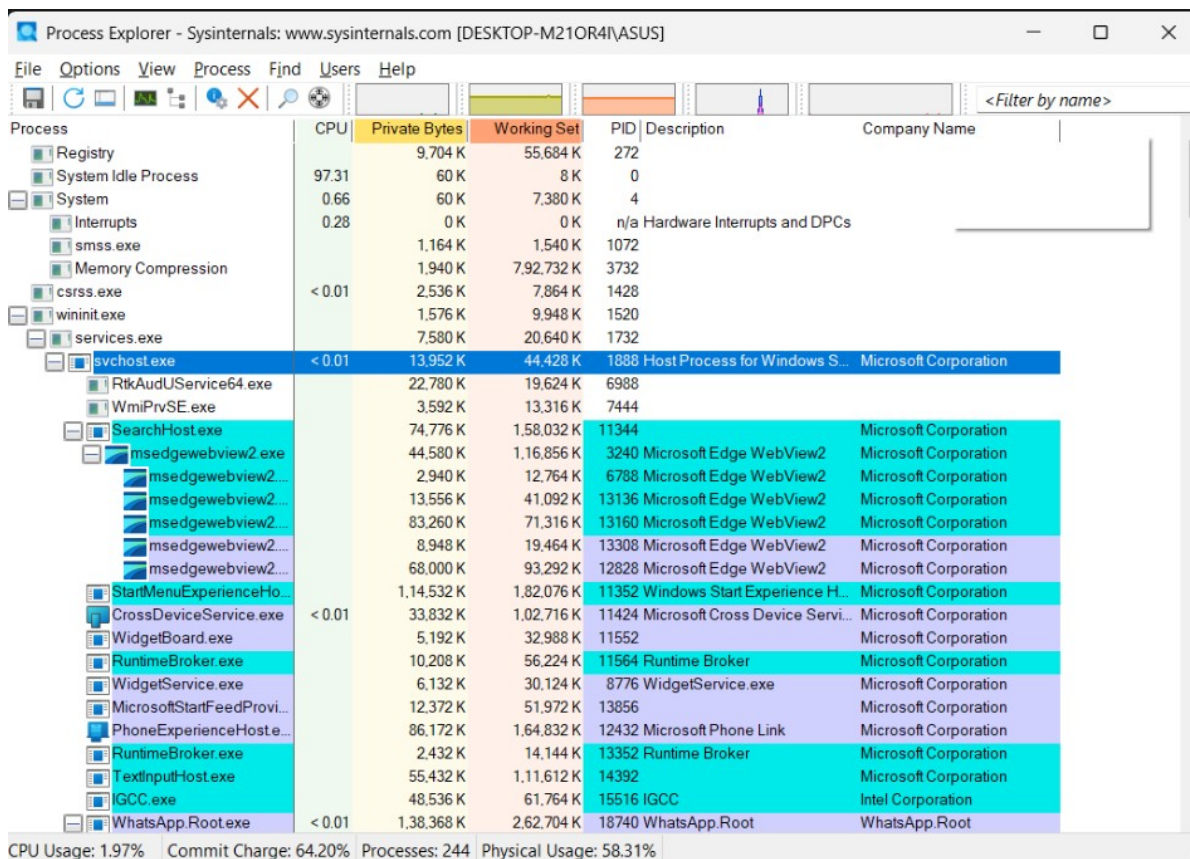

Step 7: Observe CPU and Memory Usage

The Process Explorer main window was examined to observe the resource usage of the selected process. The approximate values recorded for svchost.exe were:

Parameter	Value
CPU	<0.01%
Private Bytes	13,024 K
Working Set	41,516 K
PID	1888
Company Name	Microsoft Corporation

Step 8: Analyze the Process

The selected svchost.exe process was analyzed using its process name, executable path, parent process, digital signature, company name, registered services, CPU usage, and memory usage. The executable was located at C:\Windows\System32\svchost.exe and was verified as Microsoft Windows Publisher. The process was also associated with standard Windows services. Based on the characteristics observed during the examination, no obvious suspicious indicators were identified.

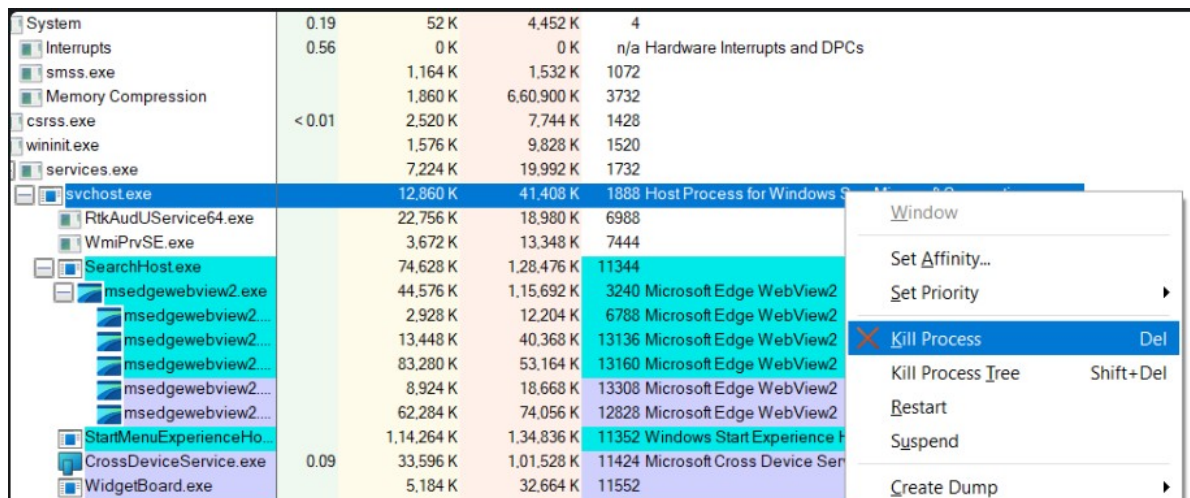

Screenshot 6 - Process analysis in Process Explorer

Step 9: Process Control Options

The context menu of the selected process was opened. The available options included Kill Process, Kill Process Tree, Restart, Suspend, and Create Dump.

The Kill Process option was not used because the examined svchost.exe process did not show any obvious suspicious indicators. It had a verified Microsoft Windows publisher signature, was located in the Windows System32 directory, and was associated with standard Windows services. Therefore, terminating the process was not necessary for this experiment.

Process Name	CPU	Private	Working Set	PID	Parent
System	0.19	52 K	4,452 K	4	
Interrupts	0.56	0 K	0 K	n/a	Hardware Interrupts and DPCs
smss.exe		1,164 K	1,532 K	1072	
Memory Compression		1,860 K	6,60,900 K	3732	
csrss.exe	< 0.01	2,520 K	7,744 K	1428	
wininit.exe		1,576 K	9,828 K	1520	
services.exe		7,224 K	19,992 K	1732	
svchost.exe		12,860 K	41,408 K	1888	Host Process for Windows S...
RtkAudUService64.exe		22,756 K	18,980 K	6988	
WmiPrvSE.exe		3,672 K	13,348 K	7444	
SearchHost.exe		74,628 K	1,28,476 K	11344	
msedgewebview2.exe		44,576 K	1,15,692 K	3240	Microsoft Edge WebView2
msedgewebview2.exe		2,928 K	12,204 K	6788	Microsoft Edge WebView2
msedgewebview2.exe		13,448 K	40,368 K	13136	Microsoft Edge WebView2
msedgewebview2.exe		83,280 K	53,164 K	13160	Microsoft Edge WebView2
msedgewebview2.exe		8,924 K	18,668 K	13308	Microsoft Edge WebView2
msedgewebview2.exe		62,284 K	74,056 K	12828	Microsoft Edge WebView2
StartMenuExperienceHost.exe		1,14,264 K	1,34,836 K	11352	Windows Start Experience Host
CrossDeviceService.exe	0.09	33,596 K	1,01,528 K	11424	Microsoft Cross Device Ser...
WidgetBoard.exe		5,184 K	32,664 K	11552	

Screenshot 7 - Process control options

OBSERVATION

The svchost.exe process with PID 1888 was examined using Microsoft Sysinternals Process Explorer. Its process details, executable path, digital signature, parent process, registered services, CPU usage, and memory usage were checked. The process was located in the Windows System32 directory and was verified as Microsoft Windows Publisher.

RESULT

Microsoft Sysinternals Process Explorer was successfully used to examine a running Windows process and identify potential suspicious indicators. The examined svchost.exe process showed characteristics consistent with a legitimate Windows system process, and no obvious suspicious indicators were observed during the examination.
